

**Unit Name** Rehab Acquired Brain Injury Unit

**Unit Location** 7<sup>th</sup> Floor Nova Scotia Rehabilitation & Arthritis Centre

**Program** Rehabilitation & Supportive Care

**Nova Scotia Health Authority Inpatient Service Profile**

**The purpose of this Profile is to provide Nurses with an overview of each service area.**

<b><u>General Information</u></b>	
<b>Service</b>	7 <sup>th</sup> Floor Rehab Acquired Brain Injury Unit
<b>Site</b>	Nova Scotia Rehabilitation & Arthritis Centre Site  QEII Health Sciences Centre
<b>Brief description of the Unit</b>	The Rehab ABI Unit is a 23 bed in-patient tertiary acquired brain injury rehabilitation unit. The unit is staffed by a full interdisciplinary complement of rehab professionals from nursing, physical medicine & rehabilitation, social work, recreation therapy, OT, PT, psychology, speech-language pathology, food & nutrition and other services. Clinicians work within their scope to contribute to patient and team goals to optimize recovery and maximize patient's level of functional independence.
<b>Unit Orientation</b>	Nurses are scheduled for several orientation shifts with a mentor to observe nursing practice on the unit. The Clinical Nurse Educator provides formal orientation sessions and support while the nurse transitions to assuming her own assignment. Nurses attend formal organization-wide nursing orientation sessions. The Unit accepts Grad Nurses and orients new staff nurses who have come to rehab to seek a new career experience. The Unit's Clinical Nurse Leader and Manager provide on-going, on-site support for all staff.

<b>Number of Beds</b>	23 beds.
-----------------------	----------

<u><b>Patient Care</b></u>	
<b>Patient Population</b>	This in-patient rehabilitation unit has a population of patients who have experienced an acquired brain injury such: open, closed or penetrating traumatic brain injury, stroke, other vascular events, aneurysm, subarachnoid hemorrhage, encephalopathies, brain tumour, hydrocephalous and a variety of other conditions as a result of traumatic or non-traumatic injuries to the brain. Collaboratively, our healthcare team strives to provide the highest level of quality patient care to ensure the best outcomes for our patients. Based on goals informed by formal assessments and patient input, the patient and family participate in daily individual and group rehabilitation programs that assist them to achieve optimal levels of independence.
