Burn Care Exercise Program
Positioning for Upper Extremity Swelling

Instructions
✓ After a burn injury, swelling (edema) in the limbs is common. This swelling can be painful, cause stiffness, and affect movement and your ability to do daily activities.
✓ One of the easiest ways to manage swelling is by elevating (raising up) the swollen limb.
✓ The goal is to elevate the swollen limb slightly above the level of the heart. This helps the extra fluid move back towards the heart for circulation to the rest of the body.

Positioning in bed
• Do these for _____ minutes every _____ hour(s).

Lie down on your back, and elevate your affected arm on 1-2 pillows. If your hand is more swollen than the rest of your arm, elevate your hand on a larger pillow than the rest of your arm.

Lie down on your side. Relax your swollen arm on top of 2 pillows.

What are your questions? Please ask.

Positioning when sitting
• Elevate your hand above your heart using pillows or by holding your hand up in the air.
• Do this for _____ minutes every _____ hour(s).

Positioning when standing
• Elevate your hand above your heart while standing or walking. You can do this by holding your hand above your heart, resting it on a piece of furniture while standing, or resting it gently on your head. Do not use a sling as this can further restrict fluid movement.
• Do this for _____ minutes every _____ hour(s).

More tips to control swelling:
• Wear your pressure garments as prescribed.
• Follow specific body part positioning recommendations from your therapist.
• Exercise regularly as discussed with your physiotherapist.
