

Semen Collection

Pathology and Laboratory Medicine Halifax Area

Why do I have to bring my sample to the lab between 8 a.m. and noon?

- Semen samples are submitted to the lab in the morning so that they can be analyzed the same day. Samples that are received after the noon cut-off time will not be analyzed.

Why do I have to answer all of the Semen Analysis Request form questions?

- This information is needed to analyze your sample correctly. Incomplete forms may cause delay, inaccurate results, and/or specimen rejection.
- If your form is not complete when you bring your sample to the lab, you may need to fill out another form.

What will happen if my sample is rejected?

- A report will be sent to your primary health care provider to let them know that your sample was rejected.

When will my results be ready?

- A report will be sent to your primary health care provider within 5 business days.

Can I collect my semen sample somewhere in the lab building?

- No. You must collect your sample before arriving at the lab.

Where do I drop off my sample and completed form?

Central Specimen Accessioning
5788 University Avenue
Main floor, MacKenzie Building
Victoria General (VG) site,
QEII Health Sciences Centre

Semen samples are only accepted:

- › **Monday to Friday
(not on holidays)**
- › **8 a.m. to noon (12 p.m.)**

Do not leave before a health care staff member has accepted your sample.

Nova Scotia Health promotes a smoke-free, vape-free, and scent-free environment.

Please do not use perfumed products. Thank you!

The information in this pamphlet is to be updated every 3 years or as needed.

Your doctor will give you a Semen Analysis Request form. You must fill out this form before dropping off your semen sample for testing. Your doctor can help you with this form. It must have:

- › Type of analysis needed
- › Date(s) of vasectomy and/or reversal (if applicable)
- › Time of last ejaculation (semen was released from the penis) before sample collection
- › Date and time of sample collection
- › Your full name
- › Your date of birth
- › Your health card number
- › Your health care provider's full name and address

Instructions

- **Do not have any type of sex, masturbate, or ejaculate for at least 3 days before collecting your semen sample.**
- Your sample **must** be collected in a plastic, sterile (disinfected) container with a screw-top lid. We recommend using a specimen container given to you by your health care provider.

- Your sample must be collected in a container labelled with your full name, date of birth, and health card number using a ballpoint pen.
- Masturbation is the best way to collect a sample.
- Bring your sample to the lab between **8 a.m. and noon**. The address of the lab is on the back of this pamphlet.
- **Your sample must be given to the lab within 1 hour of being collected.**
- Try to keep the sample close to body temperature until it is delivered to the lab.
- When dropping off your sample, **do not leave before a staff member has accepted your sample.**

Common questions

Why do I have to bring my sample to the lab within 1 hour of collection?

- Semen sample analysis is time-sensitive. Over time, the semen can change. After 1 hour, your test results may not be reliable.

- **If your sample has been collected more than 1 hour before being dropped, it may be rejected and you may need to give a second sample.**

Can I use a condom to collect semen and then deposit it into a sterile container?

- No. Most condoms contain spermicides and/or lubricants (lube) which are toxic (can kill) to sperm.
- Using a condom also means that there will be less semen to test.
- If you must use a condom for cultural or religious reasons, there are special condoms available for semen collection. Ask your health care provider for more information.

Why do I have to wait 3 days after having sex or ejaculating before I can collect a sample?

- Ejaculating in the days before your sample collection may change your test results. It may cause you to have a lower sperm count (less sperm) or higher sperm motility (movement rate).
